Bell's Travel Plaza

"A state-of-the-art facility for commercial and family travelers."

We are planning to build a new image facility with six-card reader, self-serve MPDS stations under full canopy in an in-line drive-in configuration. It will be a highly visible, new image facility with 1,400 feet of frontage.

Our site is of more than adequate size for the proposed Bell's Travel Plaza with the following features:

- Phase I will consist of a fuel/C-store that will offer the usual amenities including a fast-food court with drive up windows; local "home cooking" restaurant; six-position auto fueling island. There will also be a seven-position truck diesel island under high canopy that will be isolated from the retail base with truckers' services. There will be hard-surface parking for a minimum of 100 in-cab-services stalls for 18-wheelers along with approximately 150 spaces for non-service related parking.
- Phase II will include a national-chain hotel. This facility will cater to the traveling public as well as those visiting the area.
- Phase III will consist of a stand-alone restaurant.
